

Colour matched fasteners in small order quantities

GBK offer colour matched parts in low MOQ's with low temperature enamel bake coating process:

Choose from over 40 part number references within the **Pine Tree Clip | Ratchet Rivet | Snap Rivet** product ranges, offering a broad selection of fastening type, hole size & panel range options to users.

The process is a computer controlled colour mixing system, which pre-mixes & sprays the heads of the parts with an enamel powder mixed to exactly match any RAL or Pantone reference whilst the parts are held in a nest fixture.

The nest is then put through a low temperature oven, which reflows the enamel powder to form a colour matched coating on the fasteners first surface. The coating is highly resilient & the part can withstand significantly more abrasion resistance than the standard uncoated product.

This process is of particular use to companies operating in the **Point of Sale | Point of Purchase | Shopfitting** market as fastening solutions can be provided which exactly match the design intent of the scheme designer.

Specialist Vehicle Convertors are also ideal end users for this process, ensuring the bespoke theme of a conversion can be carried through to the completion of the build in all key customer viewed locations.

From as few as 100 pieces
