

New Mini Rotary Damper

**New Mini Rotary Damper**

GBK is pleased to announce a new derivative of the popular Rotary Damper which adds to the existing product line.

Mini Rotary Damper - 44008  
Range of torques from 0.15Ncm thru  
to 0.50Ncm full details & tolerances  
available on request

The standard Rotary Damper products widely used in many industrial sectors are principally based on a mounting hole pitch of 19.0mm. This new family of Rotary Damper has a mounting hole pitch of 14.0mm & an overall product height of 5.9mm, greatly reduced from 8.0mm on the standard sized item.

These benefits allow use in much more tightly packaged products or enclosures, offering designers more room to use for other aspects of the product design.

GBK continue to improve & define the Motion Control & Panel Access product groups, further new product developments will be made during 2015.

Please contact the sales office for further information or sample requests.

Talk to GBK about your fastening, fixing and component needs and discover why GBK ship product globally and solve problems daily.

**Date: January 2015**
